

Vision for the UNEP SBCI metric and protocol:

Birgitte Holter, SBCI chair 2009

Vision for the UNEP SBCI metric and protocol:

1. Demonstrate that a common global approach is possible;
2. Support existing building certification and rating systems in being consistent and comparable in energy- and carbon foot-printing;

Vision for the UNEP SBCI metric and protocol:

3. Use a performance, not prescriptive approach

Vision for the UNEP SBCI metric and protocol:

4. Keep it simple, measurable, reportable, and verifiable -MRV
5. Focus on data collection, reporting, baselines, and trends, not on targets

Vision for the UNEP SBCI metric and protocol:

6. Adhere to the 80:20 rule
 - perfection is the enemy of the good;
7. Take a modular approach to objectives

The metrics and protocol shall:

1. Demonstrate that a common global approach is possible;
2. Support existing building certification and rating systems in being consistent and comparable in carbon footprinting;
3. Use a performance, not prescriptive approach;
4. Keep it simple, measurable, reportable, and verifiable (MRV);
5. Focus on data collection, reporting, baselines, and trends, not on targets;
6. Adhere to the 80:20 rule (perfection is the enemy of the good);
7. Take a modular approach to objectives

My message:

Plurality & Simplicity
